[Email](#) | [LinkedIn](#) | [GitHub](#) | +91-9618589048

Motivated Computer Science and Engineering (AI & ML) student with a strong interest in artificial intelligence, machine learning, and software development. Passionate about building practical technology solutions and continuously improving my skills through projects and learning. Experienced in working with programming concepts, data analysis, and problem-solving, with a focus on creating efficient and user-friendly applications. Looking for opportunities to apply my knowledge, collaborate with teams, and contribute to innovative projects while growing as a technology professional.

HIGHLIGHTS

- Built and deployed 3 end-to-end ML projects — from data preprocessing through CNN model training to Flask REST API integration — not just notebooks.
- ~95% average model accuracy across 3 deployed CNN-based projects (95%, 92%, 97%), validated via cross-validation and benchmarked against SVM, Random Forest, and Decision Tree baselines.
- Hands-on with Python, TensorFlow/Keras, Git-based collaborative workflows, and core data structures & algorithms.

EDUCATION

Bachelor of Technology, Computer Science (AI & ML)

Mahatma Gandhi Institute of Technology

Expected 2027

Intermediate (Class XII)

Sri Chaitanya Junior College

2021 – 2023

TECHNICAL SKILLS

- **Programming & Development:** Python, Flask, REST API Development, HTML, CSS, JavaScript, SQL, PostgreSQL, Data Structures & Algorithms (DSA)
- **Machine Learning & AI:** CNN, SVM, Random Forest, Decision Tree, KNN, DeepFace, Model Training & Deployment, Image Preprocessing, Cross-Validation, Hyperparameter Tuning
- **Data & Automation:** Pandas, NumPy, Dataset Integrity Checks, Label Mapping, BLOB Storage, Batch Inference Automation
- **Tools & Collaboration:** Git & GitHub, Jupyter Notebook, TensorFlow, Keras, Scikit-Learn, Agile/team-based development
- **Soft Skills:** Team Collaboration, Adaptability, Time Management, Leadership, Communication, Creativity

PROJECTS

Find Buddy — AI-Powered Missing Person Identification System

- Achieved 95% face-match accuracy by building a real-time facial recognition system with DeepFace and CNN models, exposed through a Flask REST API and integrated with an Android Studio frontend — matching against live input rather than a static training set.
- Automated the end-to-end matching pipeline, from image preprocessing to prediction, replacing manual visual comparison with an automated inference workflow.
- Designed a modern, accessible UI (gradient and card-based layout, seamless navigation) for the system, developed collaboratively using Git version control.

CNN-Based Image Classifier for Defect Detection

- Achieved 92% defect-detection accuracy on a dataset of 1,000 images by developing a CNN model with image preprocessing — resizing, normalization, and augmentation — and hyperparameter tuning.
- Validated model robustness through k-fold cross-validation and benchmarked performance against SVM and Random Forest baselines, confirming the CNN approach outperformed both.

Machine Disease Detection System — Plant Leaf Classification

- Achieved 97% classification accuracy on a dataset of 1,000 leaf images by building a CNN-based image classification pipeline with segmentation and normalization preprocessing.
- Automated dataset integrity checks and label-mapping workflows using Pandas and NumPy to streamline preprocessing across the 1,000-image dataset.

CERTIFICATIONS & ACTIVITIES

Certifications: AI Fundamentals — Cisco; AI Fundamentals — IBM SkillsBuild.

Activities: Smart India Hackathon (SIH) competitor; AI ClueSeekers volunteer; Project Expo organizer; Generative AI & Agentic AI workshops.
